

# How to edit the questionnaires

## The 3 questionnaires templates:

- [Questionnaire 1](#)
- [Questionnaire 2](#)
- [Questionnaire 3](#)

## How to edit

In all the above links click on the “pencil” button

All the text to modify are inside a “trans” function with the form

```
{% trans "text" %}
```

For example

```
{% trans "Did other members follow the recommendations of action?" %}
```

change only inside the quotes “”

# How to edit the instructions and agreement

The 2 templates:

- [Instructions](#)
- [Agreement](#)

The 2 templates are much simpler than the questionnaires. There are simple HTML tags.

In HTML everything is inside some `<tag>text</tag>` (note the "/" in the close tag) in this case we say "text" is inside the tag "tag"

for example if you put

`<h1>Title</h1>`

the `<h1>` tag is for "HEADING 1" or title 1 in word

If you want to put "arrows" you can put `&rarr;`

Here you can find a lot of symbols to use [http://www.w3schools.com/charsets/ref\\_utf\\_arrows.asp](http://www.w3schools.com/charsets/ref_utf_arrows.asp)

Basic HTML Tags: [http://www.tutorialspoint.com/html/html\\_basic\\_tags.htm](http://www.tutorialspoint.com/html/html_basic_tags.htm)

Suggestion: the formulas look really nice inside the "`<code></code>`" tag
